

## SALES BULLETIN No 043

### Lehr Dead Plates

The purpose of the Lehr Dead Plates is to provide a stable flat platform for the bottle to be pushed between the Cross Conveyor and the Lehr Belt.

These plates are quick to change in addition to being extremely tough wearing.

D A Oldfield are proud to offer a choice between two high quality Lehr Dead Plates:

- ⚙ Our Soft mild steel plate which offers a surface hardened to 55 Rockwell hardness – these plates are long lasting and at a budget price. We can also utilise the Nitride Hardening Process – this cold process won't distort the plate whilst hardening.
- ⚙ Our premium Lehr Dead Plates are made from Tool Steel Grade 1. This is utilised using the Through Hardening process and is only just machinable, this plate will provide a longer life, whilst providing the surface hardness of 55 Rockwell. We can also provide additional hardness where or when required. Please contact us to find out more.
