DAO Servo Shear Mechanism Overhaul & Spares

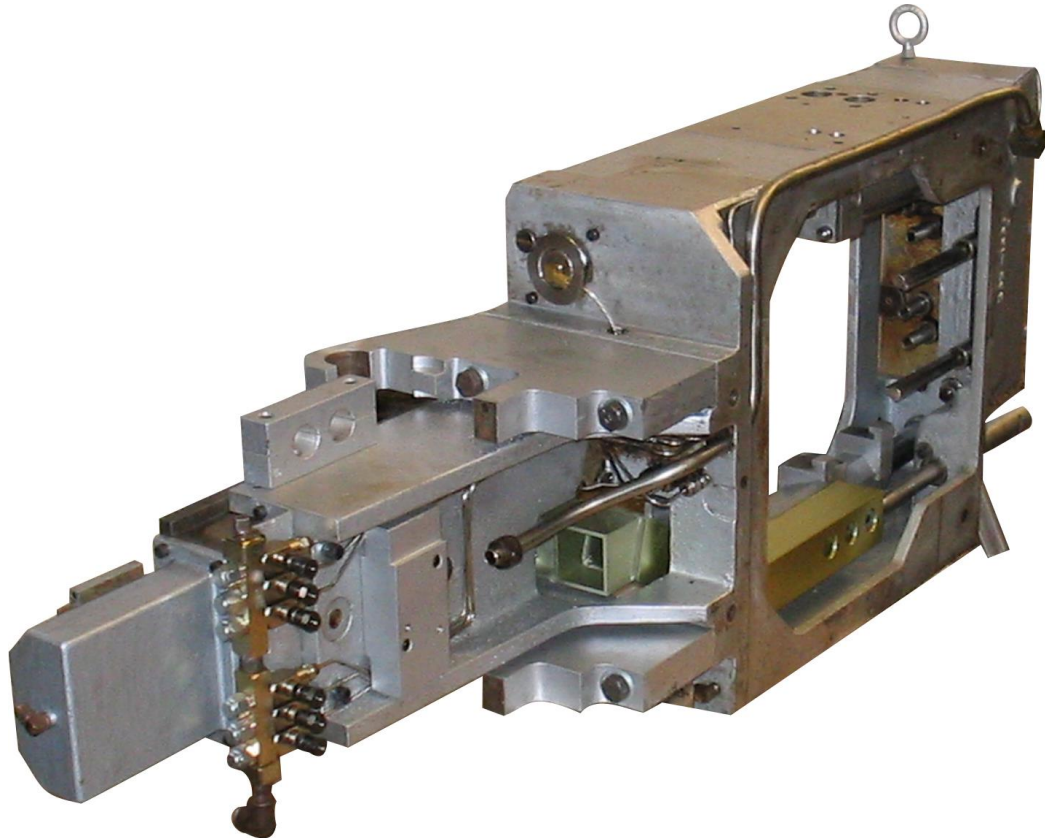

Figure 1 shows a finished unit ready to ship back to the customer

DAO offer a refurbishment service for your old shear mechanisms by our skilled fitting team in our workshops. We bring your shear mechanism back to a new standard giving it a new lease of life at an affordable price.

This service usually starts by you sending us your worn spare unit. We strip the mechanism to identify the parts we need to replace, estimate the labour required to rebuild and send you our quotation with a delivery time scale.

On receipt of your official order number, we will proceed with the approved work. If you don't want to go ahead, we will send the unit back to you without you incurring a return cost.

We have a wide supply of spare parts available from stock or made to order in 4-5 weeks using modern CNC machine centres for uniformity and speed.
