### STK 9004 Straight Transfer

Figure 1. Front view of the STK 9004 Straight transfer

The original STK 9004 straight Transfer unit is still in use today. Most Glassworks have one unit they use when an awkward bottle shape, usually a large slow-moving bottle is in need of transferring. It is an economical transfer with a straight transfer edge, and fingers positioned very low on the container, with a wide range from 3" to 18" spacing. In the event of a tall container the transfer can be converted in to a double deck transfer using two chains with a finger at the bottom of the bottle and another at the top to give maximum support.

We can offer more modern stainless steel felt or braid fingers to fit this transfer and convert to carbon bearings to increase the time it can stay on line.

Service exchange is offered on this transfer unit backed up with off shelf spare parts.
