DAO Stainless Steel Glass Contact Material

Some of the range of different types of stainless steel material available.

All our stainless steel range of felt, tape and rope are made from a high grade of 100% stainless steel fibre, there are no additives used in the manufacturing process or in the finished product makeup, this assures that no contaminants are in contact with the soft glass. The parts we supply are just put together in different forms to suit the application in our industry.

As original equipment suppliers we are well placed to offer you the raw material which you can cut to size and bond to your own existing fastening devices, or why not use our latest technology push bars, transfer fingers and wipe out pushers fitted with stainless steel materials, all made to fit your equipment?

Felt Characteristics: There are two types soft and heavy duty, the soft type is soft to the touch, typically 6mm thick with millions of fine fibres, easy to bend around parts, cuts with strong scissors. Felt sizes start off with full rolls, they are typically 0.5m x 3m long, we can cut all sizes and price accordingly to your needs, the heavy-duty type has its fibres compacted tighter, this is long lasting, it comes as 5mm thick and required metal cutting hand snips to cut it.

Tape Characteristics: Woven fibre medium softness to the touch material, typically 2-5mm thick supplied in strips 25mm to 100mm wide in Roll length of up to 25 metres. It is long lasting but is only bendable in one direction. Cuts to length with metal hand snips.

Ropes Characteristics: Very strong woven diameters are 4mm up to 8mm, good as bottle neck guides on stackers, comes in roll lengths 25m again we can cut to length using metal hand snips to suit your requirements.

We also have our own high temperature bonding silicone GQO 12 (310 ml), which fits in a standard applicator gun for ease of use.
