

SALES BULLETIN No 050 Operator Tools

Our Operator tools are quality handmade tools designed to be used by IS Machine Operators to adjust the machines during operation.

These tools are normally located on the machine board at the end of the machines. Some benefits to these tools include:

- ⊗ Access of difficult positions
- ⊗ Dual function tools – for example part of the tool may crack off a locknut, the centre of the tool can be used to adjust a needle valve and the other part can lock up the lock nut.
- ⊗ Safety is a key element to tool design, ensuring hands are kept out of the machine when making adjustments
- ⊗ Tools designed to ensure operators are not rounding off the heads of the bolts.
