81/503 Feeder Mechanism Build Stand

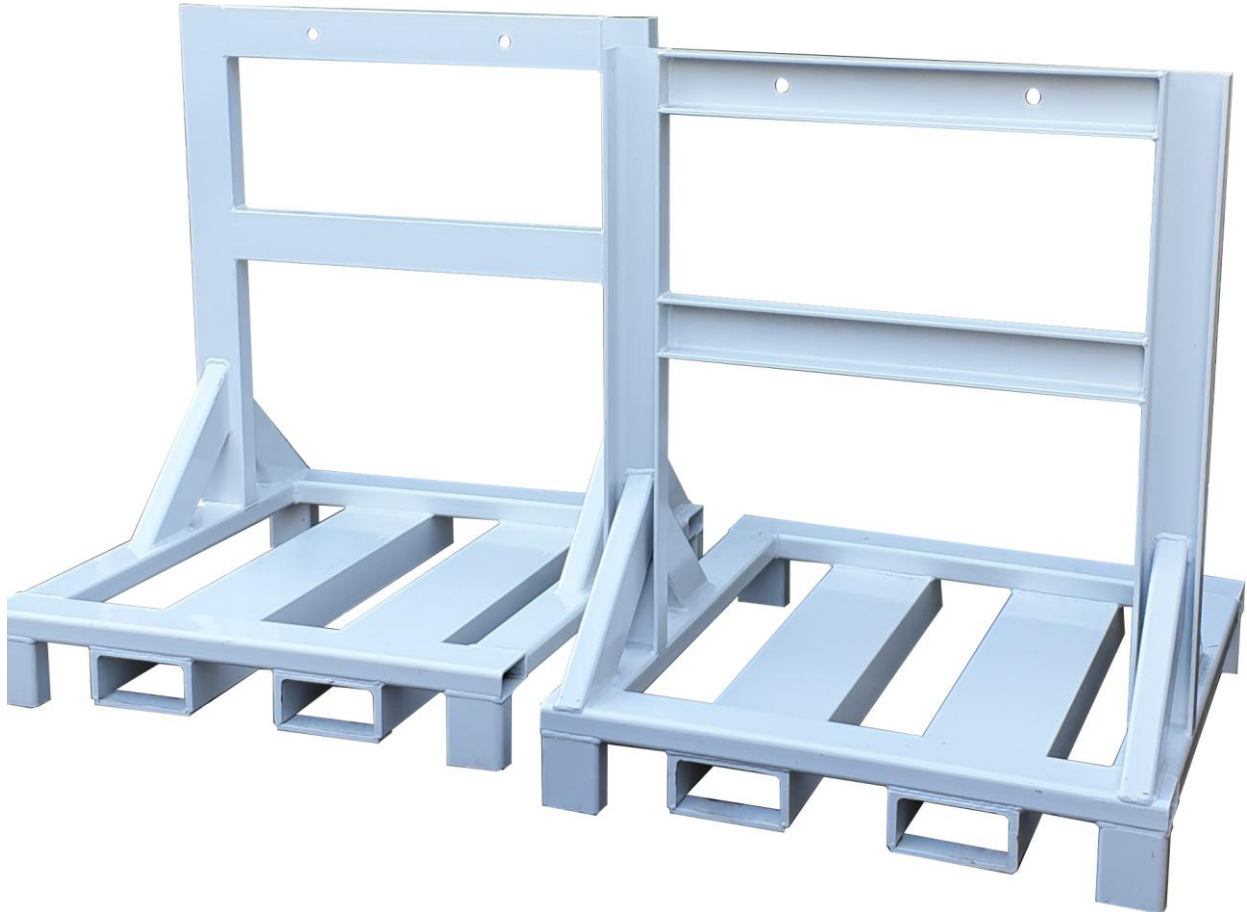

Figure 1. Shows two build stands ready to go to customers

The DAO feeder build stand has a robust construction using box section and channel steel. It is designed to allow the ease of major repairs to your feeder mechanism and offers a safe structure for lifting the heavy feeder up/down from the feeder platform and transporting to your fitting shop. Whilst in the fitting shop the stand can be moved around easily with a standard pallet truck. The build stand is powder coated gloss white creating an anti-rust and easy to clean surface which wouldn't look out of place in your workshop.
